MENTAL HEALTH

ABOUT US

Best Medical & Health care Needs to Our Patients

Based upon modern technology and the utilization of the modern approach for the building of any complex, specially a large hospital, the Chief Architect, Chandigarh Administration evolved a new concept based on the modular system with self-contained modules for different functions with vertical and horizontal integration, a central core which will take away the use of unending corridors of the traditional hospital buildings constructed in the past. Hospital building has been constructed with the highest specifications available in the country so that it can be kept hygienically clean and relatively infection free. Crevices, projections and other designs, which can collect dust and cobwebs, have been avoided in the construction.
